Key Assumptions

1. Usage & Request Volume:

•The request volumes listed (e.g., 10,000 for Geocoding, Static Maps, etc.) reflect **monthly usage limits included** under the standard pricing plan or enterprise agreement.
•Estimated usage assumes **even distribution** throughout the month. Any unexpected spikes or usage clustering may trigger rate limits or additional charges.
•Only **one API request per transaction event** is considered per service (e.g., one geocode lookup or one map render per relevant user action).

2. Pricing & Costing:

•Additional costs per 1,000 requests are based on **public Google Maps Platform pricing**, as of the current date and to be directly paid by APAC to Google.
•Prices listed are in **USD** and **do not account for exchange rate fluctuations** or **local taxes.**
•No bulk discount, custom pricing, or volume commitment has been assumed at this stage.
•Estimated costs are **exclusive of any support, SLA upgrades**, or enterprise-specific surcharges.

3. Technical Scope:

•API integration is assumed to be done via **standard Google-provided SDKs or REST APIs**.
•Only the listed APIs (Geocoding, Static Maps, Street View, Places API, etc.) are included in this scope.
•The current estimates assume **read-only access scenarios** — no write/modification endpoints are used.

4. Infrastructure and Setup:
•The one-time setup cost covers **initial integration, environment configuration, and basic testing**.
•Annual subscription includes **access management, maintenance, monitoring, and regular API usage optimization.**
