

NUVAMA Wealth and Investment Limited

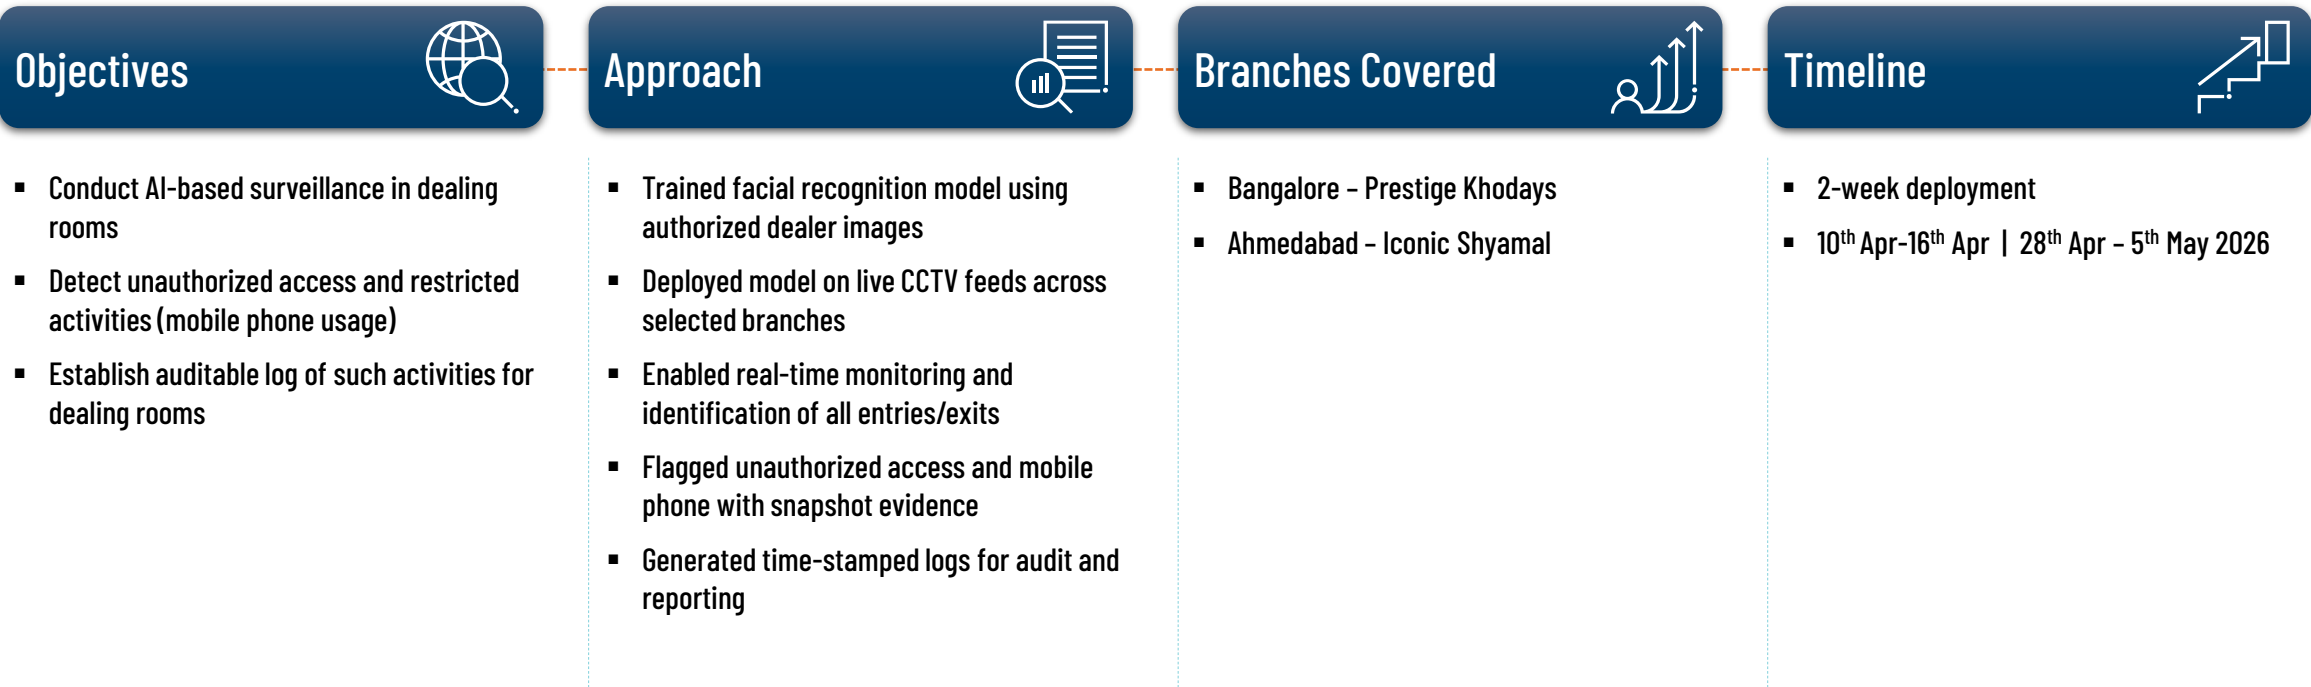

Video Surveillance Report

08th May 2026

protiviti®
Global Business Consulting

Project Overview

Protiviti was appointed by Nuvama Wealth and Investment Limited to undertake a proof of concept (POC) to evaluate video-based surveillance across two dealing rooms, with a focus on identifying unauthorized entries and monitoring mobile phone usage.

Project Limitations

Key Constraints

Reference Image Quality

- Outdated / low-quality dealer images
- Non-frontal / poorly lit captures
- Resulted in misclassification of authorized users

CCTV Feed Quality

- Inconsistent resolution and lighting across branches
- Motion blur in live feeds
- Limited facial feature extraction

Camera Placement & Coverage

- Sub-optimal angles and distant positioning
 - Faces not consistently visible (side/back views)
 - Inadequate coverage of entry zones
- Note: These challenges were more pronounced for Ahmedabad location.*

Impact

Misclassification of authorized users

Increased false positives / unreliable detection

Missed detections and frequent false alerts

Recommendations

To enable a scalable and future-ready surveillance program, the following improvements are recommended across branches:

- **Standardize reference images:**
Front-facing images with **≥1080p resolution**, proper lighting, neutral background, and periodic refresh (at least **every 12 months**)
- **Upgrade CCTV quality:**
Ensure minimum 1080p (Full HD) resolution, ≥10-15 FPS at full resolution, adequate lighting (≥500 lux at entry/exit, ≥300 lux uniform across room), and motion blur control
- **Right-size camera density:**
Deploy ~1 camera per 500 sq ft in dealing rooms (with 10-15% FOV overlap) – scaling linearly (e.g., 4 cameras ≈ 2,000sq ft)
- **Optimize camera placement:**
Dedicated face-capture cameras at entry/exit (4-6 ft, ≤30° tilt) for clear frontal capture; room-coverage cameras at 8-10 ft with 15-25° downward tilt to minimise occlusion
- **Enhance coverage:**
Achieve **≥95% coverage of entry/exit zones** and minimize blind spots across dealing rooms (*wherever feasible*)

AI Surveillance Outcomes - Snapshot

✓ Authorized –
Correctly Identified

✗ Unauthorized –
Flagged

⚠ Mobile Usage –
Compliance Breach

“Despite infrastructure limitations, the solution effectively identified unauthorized entries and instances of mobile phone usage, demonstrating strong detection capability in a live environment.”

Note: For detailed event-level reference, please refer to the embedded spreadsheet ([security_logs_combined.csv](#)).

Key Findings from Live Deployment

149

Unauthorized instances identified across 745 total observations

36

Unauthorized instances detected at Bangalore (312 total observations)

113

Unauthorized instances detected at Ahmedabad (433 total observations)

8

Mobile phone usage violations identified
