Executive Summary

protiviti®
Global Business Consulting

Why Agentic AI for Middle & Back-Office & Why Now?

$50B	160+	30–50%	$370B	50–60%
global agentic AI spend in 2025	AI use cases by top 50 banks in 2025	manual workload reduction in early deployments	annual profit uplift for retail banks via AI by 2030	of banking FTEs tied to operations
KPMG	*McKinsey*	*McKinsey*	*BCG*	*McKinsey*

Where Traditional RPA Hits a Ceiling

Middle & back-office teams have optimised with RPA, scripted workflows, and keyword parsing. But these tools are brittle - they break when formats change, can't reason across data sources, and treat every exception as a manual escalation. The human tasks that remain are the exceptions: each trade break needs contextual intelligence, dynamic reasoning, and autonomous next-step selection. This is exactly what RPA cannot do - and what Agentic AI is built for.

The Three Capabilities of Agentic AI that Bridge the Gap

Capability	What It Means	Why It Matters for Ops
Dynamic Adaptability	Adjusts behaviour based on changing inputs, formats, and conditions - no re-programming	Email formats change, counterparty naming varies, data completeness differs. The agent adapts; RPA scripts break.
Contextual Awareness	Understands the broader situation - trade history, counterparty patterns, process state	Matching isn't field comparison. It's understanding why this trade looks wrong and where to find the answer.
Autonomous Decision-Making	Selects the next workflow step independently, within defined guardrails	High confidence → auto-draft. Low confidence → escalate to MO. No human needed for routing.

protiviti®

The Ripest Opportunity - and the Industry is Already Acting

Why Middle & Back-Office is the Ripest Target

Deloitte identifies reconciliation, invoice matching, and exception handling as highest-impact areas for agentic AI in mid/back-office.

BCG frames the back office as a "digital engine" - without a modernised back office, intelligent customer experiences cannot scale.

The pattern is consistent: the ripest use cases are where breaks happen and humans are called upon to apply judgment - compare & match, optimal refinement, escalation & reporting.

Nomura's SSG Ops sits squarely in this sweet spot.
~80% of human tasks in MO and BO are repetitive applications of the art of possible enabled by GenAI & using contextual awareness for dynamic adaptation & autonomous decision making, enabled by Agentic AI.

Why choose the Protiviti edge?

Protiviti offers a dedicated AI in financial services practice that brings the best of both worlds, maneuvering the unique requirements of financial services and unlocking the power of using cutting-edge AI.

Control first | Regulator aware | AI enabled

With experience of developing and deploying AI use-cases for various financial services clients, with thought leadership in the agentic AI space, with expertise in R&C for FS, and with a team that's hungry for our partnership's success, Protiviti is strongly positioned to partner with Nomura offering the intersection of agility and experience.

Industry is Already Acting

JPMorgan Chase
GenAI assistant to 140K+ employees; $1.5B+ in targeted productivity value

Wells Fargo
200M+ fully autonomous customer interactions via AI assistant

DBS Bank
Agentic AI for complex information synthesis across front, mid, back office

US Bank (McKinsey)
AI agents for credit risk memos: 20–60% productivity gain

Meow Tech (Apr 2026)
First agentic banking platform - AI agents operating bank accounts

The agentic AI ecosystem is expanding beyond internal ops to financial infrastructure itself. The window to build internal capabilities is now.

02

Our Understanding of the Requirements

protiviti®
Global Business Consulting

Our Understanding of Nomura SSG Operations

The Foundation Already Built

- 515 HC in India, ~5,000 globally (Powai, EMEA, US, Japan)
- ABC survey: ~150 work drivers, ~1,500 activities mapped
- 220 FTE sized across 4 capability themes
- Existing tooling: Python, RPA, ServiceNow (NEWS), Chinou (Anthropic-powered), Snowflake, LangChain, LangSmith

Capability Themes (220 → ~100 FTE)

Theme	In-Scope FTE	Target FTE
Compare & Match	165	**85**
Alerts & Escalation	16	5
Optimal Refinement	8	3
Reporting & MIS	22	6

Strategic Target:
35% reduction in manual processing over 2–3 years

Three Strategic Pillars...

Automation

Leverage & enhance existing workflows (Python, RPA)

Intelligence

Apply AI where traditional automation lacks contextual reasoning

Risk Management

Human-in-the-loop; align with compliance, risk & infosec standards

... over a Three-Layer Architecture to productionize AI

Golden Data Sources (~30%)

e.g. Legacy APIs, Snowflake, intraday feeds

Logic / AI Capability Layer (~40%)

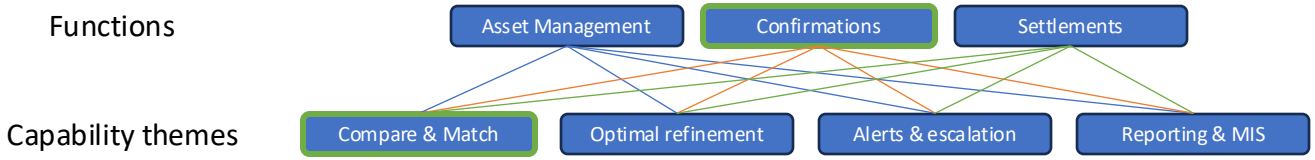
e.g. Chinou based agents for extraction, compare & match, alerting, reporting

Workflow Analytics Layer (~30%)

e.g. ServiceNow / NEWS enhanced for AI agent connectivity

Nomura vision & POC – FX OTC Settlements

Nomura Services vision is an **AI agents marketplace (i.e. repository)** with agents of different 'capability themes' available for replacing human FTE with agentic AI and HITL. These capability themed AI agents can be deployed across functions.



*These are indicative capability themes from Nomura's vision and based on the requirement of the capability for the particular workflows, these can evolve. Protiviti's GenAI 16 capabilities taxonomy helps choose the right set of capabilities.

POC candidates

1. **FX Confirmations & Settlements**
2. **OTC Confirmations & Settlements**
   Pre-settlement, settlement, post-settlement and confirmations

Selection Criteria - How Nomura Arrived at FX & OTC

01	Maximum ROI potential	03	Existing workflow availability (partial or full)
02	Source system API availability	04	No active mission-critical legacy transformations

These two areas were chosen for similarity in work nature, process maturity, and data availability. Equity & Bond Settlements - Theta/Broadridge SaaS migration in progress. Higher ROI but blocked & hence not considered.

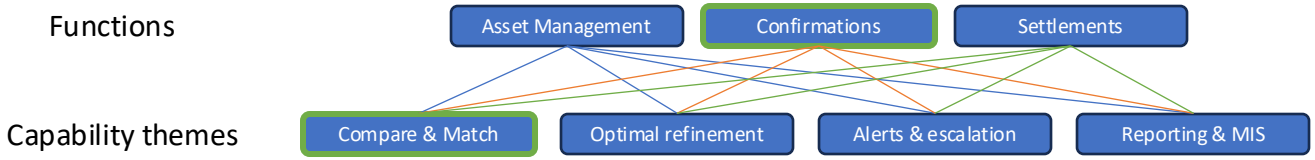
Proposed POC : An end-to-end solution for OTC confirmations, with AI agent(s) for appropriate capabilities, UI, SNOW integration & HITL

- End-to-end coverage: data ingestion → extraction → compare & match → HITL → routing → feedback loop → ServiceNow
- Purpose-built web application UI for human interaction, approvals for agent's actions, and monitoring
- RBAC and user-role-based access controls embedded in the solution
- Seamless integration with existing ServiceNow (NEWS) workflows

protiviti®

Nomura vision & POC – FX OTC Settlements

Nomura Services vision is an **AI agents marketplace (i.e. repository)** with agents of different 'capability themes' available for replacing human FTE with agentic AI and HITL. These capability themed AI agents can be deployed across functions.



*These are indicative capability themes from Nomura's vision and based on the requirement of the capability for the particular workflows, these can evolve. Protiviti's GenAI 16 capabilities taxonomy helps choose the right set of capabilities.

POC candidates

1. **FX Confirmations & Settlements**
2. **OTC Confirmations & Settlements**
   Pre-settlement, settlement, post-settlement and confirmations

Selection Criteria - How Nomura Arrived at FX & OTC

01	Maximum ROI potential	03	Existing workflow availability (partial or full)
02	Source system API availability	04	No active mission-critical legacy transformations

These two areas were chosen for similarity in work nature, process maturity, and data availability. Equity & Bond Settlements - Theta/Broadridge SaaS migration in progress. Higher ROI but blocked & hence not considered.

Proposed POC : An end-to-end solution for OTC confirmations, with AI agent(s) for appropriate capabilities, UI, SNOW integration & HITL

- End-to-end coverage: data ingestion → extraction → compare & match → HITL → routing → feedback loop → ServiceNow
- Purpose-built web application UI for human interaction, approvals for agent's actions, and monitoring
- RBAC and user-role-based access controls embedded in the solution
- Seamless integration with existing ServiceNow (NEWS) workflows

protiviti®

03

Our Approach

protiviti®
Global Business Consulting

Our Approach - Hybrid Build for Speed & Proving

The proposal is a hybrid approach where the OTC confirmations POC is built in Protiviti environment & in Nomura environment in parallel,
- using synthetic data in Protiviti environment, for speed, for circumventing paperwork approval delays and for quick demos and iterations &
- using real data, Nomura IT approved libraries and stack in Nomura environment for the actual proving

Track 1: Protiviti Environment - Fast Lane

- Build, iterate, and demonstrate on Protiviti's unrestricted infrastructure
- Entire solution runs on **synthetic sample data** mimicking Nomura's real data 1:1 (structure, volume, edge cases)
- RBAC with fictional user profiles

Track 2: Nomura Environment - Production Lane

- In parallel, replicate the solution **inside Nomura's IT ecosystem** with real production data
- Resolve library, package, and software dependency approvals
- Real employee login via Nomura SSO subject to IT integration; compliance with infosec and risk standards

Why This Works:

Parallel, not sequential: Build and approve at the same time - eliminates the #1 bottleneck

Early visibility: Stakeholders see working software in weeks, not months

De-risked: If blocked on Nomura's side, the proof still exists on Protiviti's

Controlled migration: Nomura build is a migration, not greenfield

protiviti®

POC – OTC Settlement Alleges Agentic Workflow

Design (1/3)

CURRENT STATE (indicative)

- Emails/reports arrive; keyword-based script flags potential alleged claims
- Team manually investigates - 3 of 6 standard fields often missing (Asset | CPTY | Notional | VD | Market)
- Manual search: Settlement system → FO systems → MO teams
- MO broadcast via Outlook; counter-responses are manually drafted

DATA SOURCES (indicative)

Inbound: FX TRAM, SWIFT, counterparty emails, CSD/ICSD reports
Golden Source: GLOSS API, OBI, FO systems

Pain: Repetitive compare and match with golden sources, keyword extraction misses context; data incompleteness forces manual investigation; no feedback loop from MO responses.

PROPOSED AGENTIC AI-ENHANCED WORKFLOW (indicative)

#	Function	Agent / Tool	What It Does
1	**Data Ingestion**	Extraction Agent	Ingest from TRAM, emails, CSD/ICSD - any format required for the workflow
2	**Intelligent Extraction**	Extraction Agent	Context-aware parsing → structured JSON (not keyword-based)
3	**Compare & Match**	C&M Agent	Search golden sources; group similar; confidence scoring
4	**HITL Validation**	Web App UI	Approve/reject via UI with RBAC; role-based access
5	**Confidence Routing**	Orchestrator	≥90% → auto-draft response; <90% → EMODEST broadcast to MO
6	**Feedback Loop**	Learning Agent	MO responses ingested via coded subject lines → future auto-recommend
7	**Workflow Integration**	ServiceNow	All actions logged in NEWS; workflows triggered & closed

Note: not all 'agents' shall need generative AI capabilities or 'task planning'. Some agents may execute their task autonomously on a trigger and validate the output.
Note2: the POC's scope shall be detailed during the initial project discovery phase and Nomura shall choose one workflow to integrate Agentic capabilities into

protiviti®

Agent Design: Use-Case-Specific with a Marketplace as North Star

Nomura's Agent Marketplace vision is the future north star. For the POC, we recommend use-case-specific agents - they become the seed inventory for a future marketplace.

Factor	Marketplace Approach	Use-Case-Specific (Recommended)
Time to value	Longer - abstraction layer upfront	Faster - purpose-built for OTC confirmation
Prompt tuning	Generic prompts need per-process adaptation	Optimised for specific data shapes & edge cases
Accuracy	Generalisation risks lower accuracy	Higher accuracy on target processes
Learning loop	Feedback diluted across contexts	Tight and measurable feedback loop
Path to marketplace	-	POC agents = first marketplace products

Mapping Nomura's 4 Themes → Protiviti's 16 GenAI Capabilities

Nomura's 4 themes are the "what." Protiviti's 16-capability taxonomy is the "how" - a higher-resolution decomposition for precise agent design.

- **Compare & Match** → Comparison Reasoning · Document Parsing · NLU · Anomaly Detection · Structured Data Gen
- **Alerts & Escalation** → Classification & Routing · Context Accumulation · Report Writing
- **Optimal Refinement** → Chain of Thought · Scenario Simulation · Code Generation
- **Reporting & MIS** → Summarisation · Report Writing · Personalisation

The Reusable Compare & Match Agent (North Star concept)

Goal-Based Agent

Plans and sequences toward an objective: "resolve all unmatched confirmations before cut-off."
Reasons through incomplete data, investigates across systems, improves with every resolution.

What Does It Do?

OTC Confirmations as an example:

S — SENSE Ingest confirmation requests, DK/allege notifications, counterparty responses from emails, SWIFT, trade systems. Extract trade details even when incomplete.

↓

P — PLAN Determine comparison strategy: which golden source first, what fields are missing, what tolerances apply, which counterparty patterns from memory are relevant.

↓

A — ACT Fetch from golden sources. Run field-level and semantic comparison. Score confidence. Generate match/mismatch result with evidence. Route to human or auto-confirm.

↓

R — REFLECT Store resolution outcome. Update counterparty pattern model. Recalibrate confidence from human feedback. Each cycle sharpens the next.

↻ Continuous loop — each resolution improves the next

Foundational Blocks

OTC Confirmations as an example:

Trigger	Confirmation request / Manual trigger / DK notification / Allege alert / scheduled
Tools	(i) Fetch from golden sources (GLOSS, OBI, FO) (ii) Compare trade terms (asset, CPTY, notional, VD, market) (iii) Match & score confidence with evidence trail
Memory : Long-term	Vector DB context store: HITL feedback history, past successful/failed confirmations with reasons, counterparty behavioural patterns
Memory : Short-term	State management per run (position in SPAR loop), active context across multi-step investigation
LLM	Anthropic enterprise APIs
Evaluation	RAGAS · DeepEval
Security	Real-time guardrails, PII redaction, OWASP top 10, prompt injection blocking, agent goal hijack prevention
Integrations	Source connectors (SWIFT, email, TRAM), golden source APIs, IAM for RBAC, audit logging, ServiceNow for workflow tasks
HITL	Dedicated approval interface — human reviews match proposal with evidence, approves/rejects with structured reason codes

Reusability: Same SPAR Compare & Match agent from the marketplace. We swap the foundational blocks i.e. trigger, tools, prompts, integrations per domain, whether OTC confirmations, FX settlements, equities matching, or any compare & match task in a workflow.

POC Technical Architecture & Technology Choices

Develop & Integrate

Proposed Technology Stack

Component	Technology	Role in POC
Orchestration	**LangChain/LangGraph**	Single / Multi-agent workflow orchestration (SPAR loop)
Observability	**LangSmith**	Tracing, eval frameworks, cost-per-run monitoring
HITL / UI	**Web Application**	RBAC, approvals, confidence views, audit trails
LLM	**Anthropic (Chinou)**	Extraction, comparison, response generation
Data Layer	**Snowflake + APIs**	Golden source queries (GLOSS, OBI, TRAM)
Evaluations	**RAGAS 2.0, DeepEval**	Validation and evaluation of agents

Integration Approach

- REST APIs - GLOSS, OBI, ServiceNow
- File ingestion - emails, PDFs, Excel, SWIFT, CSV
- Database queries - Snowflake, scheduled jobs
- Email: IMAP / MS Graph API for mailbox polling, body parsing, and attachment extraction
- Coded email subjects for MO feedback loop

This list is not exhaustive & based on the workflow's integration requirements, the approach shall be defined.

Optional / Deferred to Enterprise

Realtime guardrails **(Protect/Guardrails AI, Lakera Guard)**
POC: Optional for POC
Enterprise: Required

Deep observability **(Braintrust)**
POC: LangSmith covers POC
Enterprise: Available at scale

Communication **(MCP for A2DB & A2A for inter agent)**
POC: Not prioritized
Enterprise: As per need

AIBOM Generation
POC: Optional
Enterprise: Required for audit

OWASP Top 10 for Agents
POC: Addressed partially
Enterprise: Required

protiviti®

AGENT TESTING AS AN ITERATIVE DEVELOPMENT LOOP

Validate

Design → Test → Diagnose → Refine → Re-Test (repeat until convergence)

Test Cycle Objective	Accuracy	Consistency	Confidence calibration

Core Principles

Agent behavior is non-deterministic → cannot be validated via one-time UAT

Testing is embedded as a pre-deployment iterative loop until stable, repeatable outcomes are achieved

01 Scenario-Based Testing (Not Script-Based)

Execute agents on:
- **Historical claim cases**
- **Edge cases** (missing fields, conflicting data)

Validate **behavioral consistency**, not just outputs

02 Stability & Convergence Criteria

Agents are iteratively tuned until:
- **Output consistency** across repeated runs ≥ defined threshold
- Accuracy stabilizes (minimal variance across test cycles)
- Confidence scores align with **actual correctness**
- Reduction in **ambiguous / non-actionable outputs**

03 Controlled Tuning Levers (Per Iteration)

Prompt Engineering → instruction clarity, context injection
RAG Optimization → improve grounding from golden sources
Rule Layer Adjustments → deterministic overrides for edge cases
Threshold Calibration → confidence-based routing refinement

04 Agent-Level & Workflow-Level Re-Testing

Re-test:
- **Individual agents** (Extraction, C&M, Routing)
- **End-to-end workflow behavior**

Ensure **local fixes don't break global flow**

05 Human Benchmarking (Pre-Deployment)

Compare **agent decisions vs MO / SME decisions**
Track:
- **Deviation patterns**
- **Failure modes**

Use insights to **refine logic before production exposure**

06 Exit Criteria for Deployment Readiness

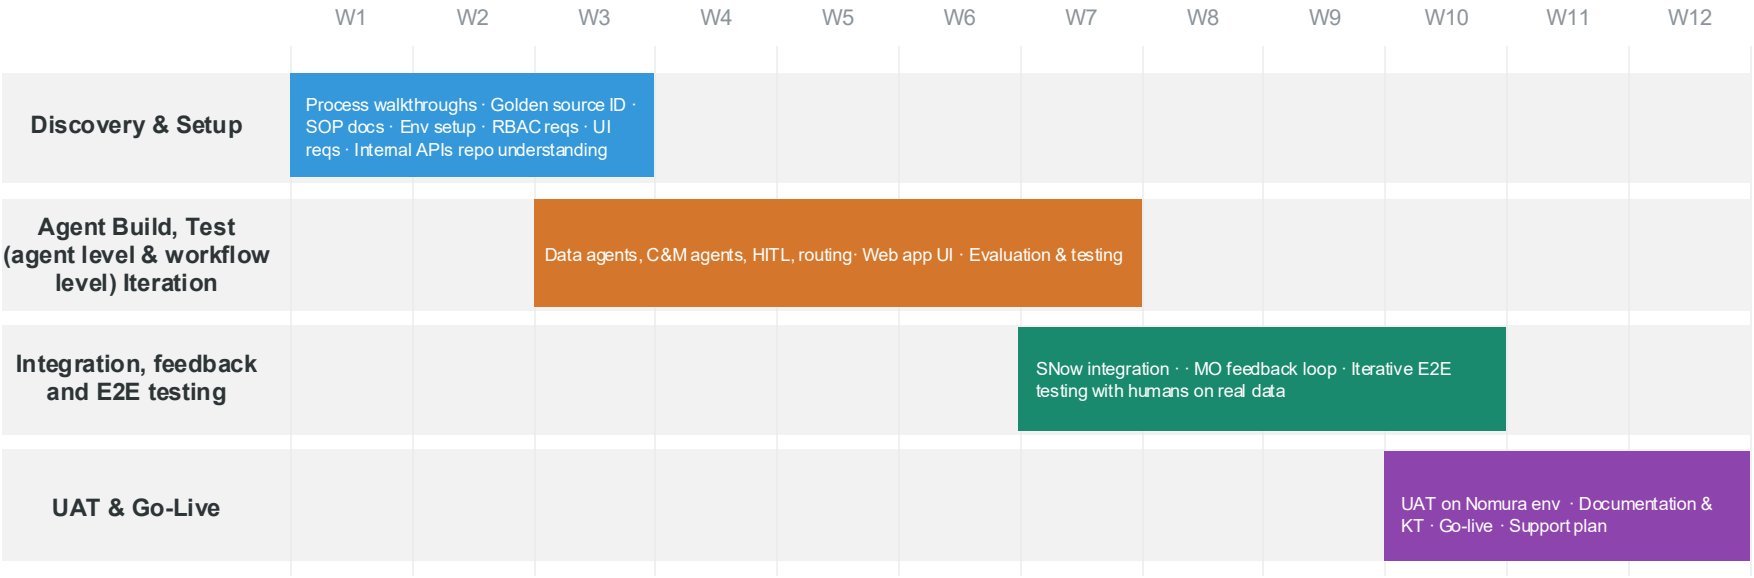
Agents are promoted only when:
- **Stable performance** across multiple test cycles
- **Low variance** in outputs for similar inputs
- Defined **accuracy thresholds** consistently met
- **Clear fallback behavior** for low-confidence scenario

04

Proposed Timelines

protiviti®
Global Business Consulting

Proposed Timeline 12-Week Plan



Note: This timeline is indicative and considers the expected phase wise time required for the steps detailed in the Approach section. Based on the workflow detailing, the phases timeline may change / overlap fluidly with concrete reasoning; however the overall target remaining 3 months

protiviti®

05

Proposed Commercials

protiviti®
Global Business Consulting

Proposed Commercials

Particular	Amount (INR)
Total Cost	
- End to end POC for OTC confirmations use-case as defined by Nomura	₹ 20,00,000.00 + applicable taxes

Key Commercial Assumptions

- Cost covers one-time end-to-end POC implementation for the defined use cases, including design, development, testing, and deployment.
- Scope limited to agreed workflows, data sources, and agent functionalities; any additional use cases or enhancements will be commercially scoped separately.
- API, cloud infrastructure, and LLM/token consumption costs are excluded and will be borne directly by the client.
- Integration with existing systems assumed via available APIs / standard connectors; any custom integration or RPA effort will be evaluated separately.
- Client to provide timely access to data, SMEs, and systems required for development and testing.
- Assumes availability of clean and sufficient historical data for testing and validation.
- User Acceptance Testing (UAT) support included; sign-off timelines to be mutually agreed.
- Solution will be deployed in a client-provided environment (cloud/on-premise) as per agreed architecture.

CONFIDENTIAL – This document is for your organization's internal use only and should not be copied or distributed to any third party.

06

Key Assumptions

protiviti®
Global Business Consulting

Key Assumptions

- Scope limited to OTC confirmations workflow as defined for the POC.
- Required data sources (TRAM, emails, CSD/ICSD reports, golden sources) will be made available with necessary access.
- Availability of sufficient and representative historical data for testing, validation, and agent tuning.
- Existing systems expose APIs or accessible interfaces for integration (direct or via middleware).
- Client will provide SME support for process validation, exception handling logic, and UAT sign-offs.
- Standardized data formats or mappings will be provided for key fields (e.g., CP, asset, value date, amount).
- ServiceNow (or equivalent) workflows are available and configurable for integration.
- User roles, approval hierarchies, and access controls (RBAC) will be defined by the client.
- Agent decisioning will operate within defined business rules, thresholds, and escalation criteria agreed during design.
- Infrastructure environment (cloud/on-prem) will be provisioned and managed by the client.

Director, Risk & Compliance

Areas of Expertise

- Risk Management
- BCBS239
- Regulatory Compliance
- Risk & Control Assurance

Industry Expertise

- Investment Banking
- Financial Services

Education and Certifications

- Post Graduate Diploma in Management (2010-2012)
- Bachelors in Computer Application (2006-2009)

Professional Experience

A data and risk advisory professional with around 15 years expertise in Process excellence, Non-Financial Risk Management, Fraud Crime Compliance (FCC), Data Management, Risk & Controls, Compliance and Internal Audit within the financial services industry. Lead operational excellence programs focusing on innovation initiatives, manage cross-functional teams, and integrate AI and analytics into core business and risk processes. Having extensive experience in leading and implementing risk and data driven programs across financial institutions of varied sizes and geographies.

Relevant Experience

- ❑ Leading engagements aligned with bank's strategic initiatives around **RDAR** focusing on the **data quality programs** and **assist remediation** by liaising with all the business and relevant stakeholders, addressing requirements through data profiling
- ❑ Lead multiple BFSI engagements around **Risk and Control Self Assessment (RCSA)** programs focusing on risk identification, risk assessment, monitoring, reporting
- ❑ Leading engagements focusing on review and gap-assessment of **Risk Data Aggregation & Risk Reporting (RDARR)** practices basis the principles laid for BCBS-239.
- ❑ **Audit and review the key policies and procedures artefacts.** Review objectives included: **compliance to applicable regulations**, alignment to the industry best-practices and bank's target operating model.
- ❑ Leading engagements focusing on **controls Assurance**. Key responsibilities included: **evaluating the control design, operational effectiveness** and report submission.
- ❑ Leading engagements for **establishment of the Risk Management department** within Financial Institutions. Key initiatives includes development of **Risk Management framework focusing on** Risk & Control Assessment Methodology, Risk Appetite Framework, Business Continuity Planning and Disaster Recovery
- ❑ Providing **advisory assistance to compliance functions** of the financial institutions for areas including: **Risk & control Management,** Reporting & Communications, **Risk Culture, Control Assurance, Key Controls Indicators etc.**
- ❑ Leading **internal audit** programs for financial institutions. Key activities includes: **independent inspection of the functions at first line of defence**, preparing audit plans, end-to-end execution and **finalizing audit reports**.
- ❑ Leading engagements focusing on the **data quality programs** and assist remediation by liaising with all the business and relevant stakeholders, addressing data requirements to fix issues from strategic and tactical perspective

Aastha Makkar

Consultant, Risk & Compliance

Areas of Expertise

- Product Control
- Due Diligence

Industry Expertise

- Investment Banking
- Financial Services

Education and Certifications

- MBA – Banking and Finance (Symbiosis 2026)
- Bachelor of commerce (Narsee Monjee, Mumbai 2020)
- NISM Series XXI-A, VII, V-A Certified

Professional Experience

Aastha Makkar is a Consultant-3 in the Risk and Compliance division at Protiviti. Prior to this she had 3+years of professional experience in Commodities Product Control, looking after managing daily P&L reporting, valuation oversight, and risk reconciliation for commodity trading desks. The responsibilities included ensuring accuracy in financial reporting, resolving system discrepancies, and maintaining compliance with regulatory standards.

Relevant Experience

- ❑ Collaborated closely with front office trading desks to ensure accurate valuation of positions and validating daily profit and loss reports for commodity trading desks, ensuring accuracy and transparency
- ❑ Contributed to the enhancement of automation of controls and streamlining of reconciliation processes to improve efficiency and save time.
- ❑ Investigating breaks and anomalies in P&L, valuation or risk reporting by delivering timely resolutions and escalating issues when necessary to mitigate risk. Additionally ensured that corrective actions were implemented to strengthen control frameworks.
- ❑ Reconciled risk metrics between front office systems and finance records by proactively identifying and resolving discrepancies to uphold data integrity.
- ❑ Maintain adherence to regulatory standards by supporting internal and external audits with accurate documentation
- ❑ Collaborated with traders, risk managers, operations and Quants teams to ensure accurate financial reporting. Maintained clear communication and delivering reliable insights to different stakeholders

Akshit Mahajan

Consultant, Risk & Compliance

Areas of Expertise

- AI/ML Development & Deployment
- Natural Language Processing
- Computer Vision
- Risk & Compliance Analytics
- Gen AI and Agentic AI

Industry Expertise

- Banking & Financial Services

Education and Certifications

- B.Tech. in Computer Science and Engineering (VIT Vellore)

Professional Experience

Akshit Mahajan is a Consultant 2 in the Risk and Compliance division at Protiviti, working as an AI/ML Developer. He specializes in building intelligent systems for banking, insurance, and fintech clients, with expertise in agentic AI, computer vision, natural language processing, and advanced analytics. His work focuses on delivering risk mitigation, compliance automation, intelligent workflow orchestration, and AI-driven customer insights.

Relevant Experience

- ❑ Business Request Intelligence Platform : Built a LangGraph-based workflow automation solution for unstructured business requests, using agents for information extraction, data validation, tool-based lookups, recommendation generation, and human review checkpoints. Added LangSmith tracing to monitor agent runs, refine prompts, and improve reliability across iterative feedback cycles.
- ❑ AI-Powered Natural Language Query Engine : Developed an AI-driven NL-to-SQL solution that converts plain-English business questions into validated SQL queries for ad-hoc data retrieval. Implemented schema-aware prompting, context retrieval, query validation, multi-table join handling, and response summarization to make structured database insights accessible without manual SQL writing.
- ❑ RAG Chatbot & Knowledge Assistant : Developed an AI chatbot using RAG to answer domain-specific queries from internal documents and structured knowledge sources. Implemented document chunking, embeddings, vector search, retrieval grounding, tool-calling agents, conversation memory, source-aware responses, and feedback loops to improve accuracy and reduce manual research effort.
- ❑ Customer Onboarding Tool: Developed a multi-agent AI workflow for document-heavy onboarding processes, using specialized agents for document classification, field extraction, identity validation, sanctions/watchlist and adverse-media screening, exception detection, and report generation. Integrated OCR/NLP pipelines, rules-based validation, confidence scoring, human review handoffs, and audit-ready output summaries.
- ❑ Agentic Contract Intelligence & Incentive Automation : Developed an agentic AI workflow to extract financial terms from Word/Excel agreements, validate contract clauses using fuzzy matching and table recognition, and apply business rules for incentive computation. Included confidence scoring, fallback review handling, and iterative improvement of extraction logic based on exceptions.
- ❑ Financial Market & Customer Analytics : Developed an analytics solution combining high-frequency market data, NLP-based sentiment analysis of financial news/social media, and ML-driven customer segmentation using clustering and decision trees, with interactive Power BI dashboards for financial insights and decision support.

Manav Khatri

Consultant, Risk & Compliance

Areas of Expertise

- AI/ML Development
- Agentic AI System
- Retrieval-Augmented Generation (RAG)
- Prompt Engineering & LLM Optimization

Industry Expertise

- Banking & Financial Services

Education and Certifications

- BCA in Artificial Intelligence Specialization (PU Vadodara)

Professional Experience

Manav Khatri is a Consultant 1 in the Risk and Compliance division at Protiviti, working as an AI/ML Developer with a focus on Agentic AI and enterprise workflow automation. He designs and develops AI-powered solutions for financial operations, enabling exception handling, and decision-making at scale. His expertise lies in Agentic AI and integrating LLM-driven intelligence with deterministic logic for enterprise-grade solutions.

Relevant Experience

- Agentic AI Operations Platform : Designed an AI-powered financial operations platform using LangGraphAgentic AI Operations Platform : Designed an AI-powered financial operations platform using LangGraph, Agentic AI Operations Platform : Designed an AI-powered financial operations platform using LangGraph, implementing multi-agent workflows for ingestion, extraction, compare & match, and a hybrid confidence-based decision engine enabling automation, human review, and escalation.
- Legal Document Analyzer Agent: Built a multi-agent document analysis system for compliance checking, clause summarization, and key information extraction using LLM-based structured extraction and scalable workflow pipelines, improving processing efficiency, accuracy, and consistency across diverse legal document formats and use cases.
- RAG-based Knowledge Retrieval System : Developed a document querying system using LangChain and FAISS, implementing embedding-based retrieval pipelines and context-aware response generation using retrieval-augmented prompting for improved accuracy, relevance, and domain-specific answer quality across diverse document sources.
- LLM Fine-tuning & Extraction Optimization : Improved data extraction accuracy for edge cases by preparing structured JSONL datasets and fine-tuning GPT-based models, enhancing consistency, reliability, and robustness of LLM outputs in complex, real-world workflow pipelines.
- Customer Geolocation Analytics : Designed a geospatial analytics tool using Google Maps APIs. Processed CSV/Excel coordinate data to generate static maps, street views, and 360° interactive reports, bundled into exportable ZIP archives.

Rakesh Murali

Associate Director (GenAI & Agentic AI SME)

Areas of Expertise

- Data, AI/ML, Agentic AI Products

Industry Expertise

- Digital products
- OEMs and Enterprises

Education and Certifications

- MSc. Engineering, University of Warwick, UK (2017-2018)
- B.Tech Engineering, Vellore Institute of Technology (2009-2013)

Professional Experience

Senior Product and AI/ML specialist with 12 years of cross-industry experience leading data platforms, agentic AI solutions, and LLM-based product development across automotive and mobility sectors. Proven track record of delivering RAG-based agentic AI systems, scalable data pipelines, and AI-driven analytics from concept to production in complex, regulated environments. At Protiviti, brings delivery leadership and a business-outcome-first approach to designing intelligent solutions powered by generative AI.

Relevant Experience

- ❑ Hands-on experience architecting and productising agentic AI systems, including RAG pipelines, LLM-based task execution, and multi-skill agent orchestration.
- ❑ Proven ability to deploy AI/ML, NLP, and predictive analytics solutions that translate unstructured data into structured, actionable intelligence for enterprise decision-making.
- ❑ Demonstrated track record of leading data and AI products from concept to production, with a consistent focus on measurable business outcomes and customer-centric design.
- ❑ Deep experience in user journey mapping, A/B testing, and iterative product development to ensure AI solutions are both technically sound and meaningfully adopted by end users.
- ❑ Experienced in managing large cross-functional delivery teams across engineering, data science, and UX, coordinating across geographies and organisational boundaries.
- ❑ Proven ability to engage and align senior stakeholders, including C-suite and executive leadership, through structured communication, live demonstrations, and AI roadmap presentations.

Hariprasath Paranthaman

Associate Director (Full Stack S/W Development SME)

Areas of Expertise

- Rest API Development
- Microservices

Professional Experience

Senior Full Stack Engineer with 10+ years of cross-industry experience architecting and delivering end-to-end digital solutions spanning frontend, backend, integration, and data linkage layers across enterprise and product environments. Proven track record of building scalable web applications, robust API ecosystems, and real-time data pipelines from concept to production in fast-paced, complex environments. Demonstrates strong delivery leadership and a business-outcome-first approach to engineering, consistently bridging the gap between technical architecture and product goals. Brings deep expertise in designing integration layers that connect disparate systems, enabling seamless data flow and operational efficiency at scale.

Relevant Experience

- ❑ Hands-on experience architecting and delivering end-to-end web solutions, spanning responsive frontend interfaces, scalable backend services, and production-grade API ecosystems across enterprise and product environments.
- ❑ Proven ability to design and implement integration layers that seamlessly connect with traditional systems, third-party platforms, and microservices, enabling reliable data exchange and uninterrupted business operations at scale.
- ❑ Demonstrated track record of building data linkage and transformation layers that unify structured and unstructured data sources, ensuring real-time accuracy, consistency, and downstream usability across complex platform landscapes.
- ❑ Deep experience in translating business requirements into robust technical architectures, owning end-to-end solution design with a consistent focus on scalability, maintainability, and measurable business outcomes.
- ❑ Strong expertise in API design and contract-first development, enabling clean separation of concerns across frontend, backend, and third-party service boundaries while accelerating cross-team delivery.
- ❑ Experienced in leading cross-functional delivery teams across engineering, QA, and product, driving alignment across geographies, stakeholder groups, and organisational boundaries to ensure on-time, high-quality releases.
- ❑ Proven ability to engage and align senior stakeholders and product leadership through structured communication, solution walkthroughs, and technology roadmap presentations that bridge business strategy and engineering execution.

Our Agentic AI Frameworks

protiviti®
Global Business Consulting

GenAI AND Agentic AI *Simplified*

3 step framework to integrate AI into the most optimal use-cases

Unlocking the GenAI SuperPower

Input Understanding
NLU, doc parsing, modality translation

Reasoning
CoT, comparison, anomaly, simulation

Output Generation
Reports, summaries, structured data, code

Knowledge Access
QA, classification & routing

Memory + Personalisation
Context accumulation, adaptive workflows

SPAR — The Agentic Loop

① Dynamic Adaptability

② Contextual Awareness

③ Autonomous Decision-Making

When Agentic?

F — Fluidity
Rigid process causes failures?

A — Awareness needed
Situational context required?

C — Conditions
Too many rules to hard-code?

T — Triggers & Inputs
Inputs unstructured?

O — Operational Integrations
Integrations complex & shifting?

R — Repetitive
Recurring & automatable?

S — Strategic
Aligned to business goals?

protiviti

FROM BLUEPRINTS TO ENTERPRISE AGENTIC AI

The expertise that takes **ideas** to **Production**

Architecture

Perception
UI, APIs, sensors, event triggers

Cognitive
Planning, reasoning, orchestration, memory, state mgmt

Action
Tools library, RAG, prompts, HITL, multimodality

Integration
Enterprise APIs, LLM hub & gateways, data/knowledgebase

Operations
Evals, traces, guardrails, cost mgmt, monitoring & alerts

Infrastructure
Cloud/on-prem, GPUs, vector DBs, data pipelines

Tech Stack

AgentOps	Key Capabilities	Industry Tools
Orchestration & Design	- Workflow design, HITL - Multi-agent interaction - External APIs w/ tools	LangGraph / LangGraph Studio CrewAI / CrewAI Studio n8n AI Agents
Communication	- Delegation, state communication - Integrations	APIs, MCP A2A and state maintenance
Security & Compliance	- OWASP AI Top 10 check - Real time guardrails	Protect AI Lakera Guard
AIBOM Generation	- Components of agent AI - Version & author metadata	LangSmith Metadata ManifestZero
Observability & Debugging	- Distributed tracing - Cost management	Langfuse Braintrust AgentOps
Evaluation	- Tool registry, decision-making - Agent collaboration - Test reporting & analytics	Ragas 2.0 DeepEval Pro Giskard Agent

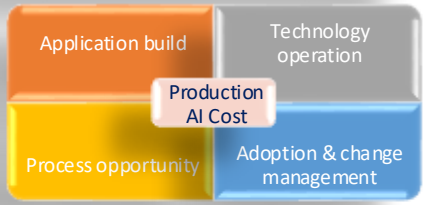
Bank Grade Security

OWASP Top 10 for Agents (2026)

1. Agent goal hijack
2. Tool misuse
3. Identity abuse
4. Supply chain vulns
5. Code execution
6. Memory poisoning
7. Insecure inter-agent comms
8. Cascading failures
9. Trust exploitation
10. Rogue agents

Optimized Costs

Cost Optimization Levers
Smart model routing · Semantic caching · Prompt compression · Batch processing · Response truncation · Tiered model selection per task complexity



protiviti

UNLOCK GENAI FOR BUSINESS PROCESS RE-ENGINEERING

The Art of possible powered by GenAI

INPUT UNDERSTANDING

NLU — Intent + Entity Extraction

Messy, code-mixed, abbreviated natural language → structured intent and entities

"buy 50k stock+1 check limits" → pre-trade compliance check

Document Parsing

Any format → structured data. PDF, scanned image, email, SWIFT, Excel, screenshots

Custodian report → GL entries

Classification + Routing

Assign input to correct category — handles edge cases that don't fit cleanly

Transaction type → GL account mapping

Modality Translation

Cross-format conversion. Image → text, table → narrative, audio → notes

Bloomberg chart screenshot → data points

OUTPUT GENERATION

Report Writing

Structured data → correctly formatted, rule-following document. Always consistent

SEBI filing, audit memo, exception summary

Summarisation

Compress with selective emphasis — knows which parts matter based on context

40-page custodian report → 5-line brief

Structured Data Generation

Instructions → machine-readable output that flows into downstream systems

GL entry JSON, SWIFT message, FIX protocol

Code Generation

Write, debug, optimise SQL, Python, VBA, Excel formulas on request

Auto-generate recon query from plain English

KNOWLEDGE ACCESS

Question Answering

Grounded answers from documents, databases, regulatory texts. Cites source

Is this trade acceptable in Nomura's WoW?

Web search compilation

Grounded answers from web search with citations and summarizations

Is this trade within SEBI limits?

MEMORY + PERSONALISATION

Context Accumulation

Remembers org-specific patterns over time. Transforms a tool into something that learns

This counterparty broke settlement 3x last month

Personalisation & Finetuning

Adapts to individual workflow preferences, communication style, role-specific, brand specific needs

CEO reports are always bottom-line-up-front

REASONING

Chain of Thought

Multi-step analysis where each step informs the next. Diagnosis, planning, root cause

Trade break investigation

Comparison Reasoning

Two or more sources that should agree → identify where they differ and why

NAV recon across AMC, custodian, Bloomberg

Anomaly Detection

Identify what is unusual vs historical pattern — no pre-defined rules required

Counterparty settling slower than usual

Scenario Simulation

Reason through cascading effects of a hypothetical. What-if analysis

If RBI raises rates 50bps, which positions at risk?

GenAI is not a single capability—it is a stack of capabilities that together enable end-to-end process re-engineering, especially for complex, exception-driven operations like settlements.

protiviti®

Data Integration Pathways

Different approaches for data integration

TRADITIONAL SYSTEM

- Core System
- Legacy DB (Oracle / SQL)
- Flat Files / Mainframe
- Data Warehouse

1 Custom API Services

- Build REST / GraphQL APIs over legacy DB
- Expose DB ops via secure, versioned endpoints
- OAuth2, JWT & API Gateway auth layers
- Scalable contracts for all consumers

2 UI Field Mapper

- Drag-drop visual mapping of DB fields
- Auto schema discovery from source tables
- Transform rules: cast, rename, derive
- No-code / low-code for business analysts

3 Scraping & RPA

- Bot-driven scraping of legacy UI screens
- RPA for closed / non-API systems
- Scheduled extraction & change detection
- Tools: UiPath, Automation Anywhere, Python

4 ETL / Data Pipelines

- Batch & streaming ETL to target data store
- Transform, cleanse & deduplicate records
- Orchestrated via Airflow / dbt / SSIS
- Real-time Change Data Capture (CDC)

5 Event Streaming

- Publish DB changes as events (Kafka / Kinesis)
- Decoupled consumers for real-time sync
- Enables CQRS & event-driven architecture
- Low-latency integration across domains

6 Dump Extract & Scheduler

- Scheduled full / incremental DB dump exports
- Automated file drops to SFTP / S3 / shared drives
- Triggered batch ingestion on file arrival
- Lightweight option for low-frequency data needs

09

Our AI Capabilities

protiviti®
Global Business Consulting

Protiviti's Solution Capabilities in Artificial Intelligence Powered Transformation

Our AI capabilities across Formats, Financial Services, and Business Lines are focused on unlocking the full potential of AI & ML through end-to-end strategy, implementation, and governance services.

01 AI & GenAI Strategy & Roadmap

Identify high-impact use cases, define target architecture, governance, and align AI initiatives with regulatory and business goals.

02 Intelligent Process Automation & Workflow Transformation

Automate financial workflows—KYC, underwriting, reconciliations, compliance etc. —using Gen AI & agentic AI.

03 AI-Powered Risk Model Deployment

Develop, validate, and govern predictive AI models for credit, market, ALM and fraud risks with robust documentation, monitoring, and explainability frameworks.

04 AI Acceleration Lab & Rapid PoC Deployment

Translate business challenges into quick-turn AI prototypes and PoCs to validate value, fast-track adoption, and enable scalable enterprise deployment.

Across Formats

- Text
- Code
- Image
- Audio
- Video

Across Financial Services

- Banks
- NBFCs
- HFCs/ MFIs
- AMCs
- Payment Services
- Digital/Neo Banks
- FinTech Platforms
- Insurance/ Pension Funds
- Rating Agencies

Across Business Lines

- Customer onboarding
- KYC & Underwriting
- Market & Liquidity Risk Analytics
- Treasury, ALM & Cash Flow Forecasting
- Operational & Conduct Risk
- Fraud & Financial Crime
- Regulatory Compliance & Reporting
- Model Risk & Validation
- ESG & Climate Risk
- Claims, Collections & Servicing
- Product & Pricing Analytics
- Audit & Control Automation
- Data Governance & Process Excellence
- Customer Experience & Services

protiviti®

Agentic AI Enablement Lab

Design, deploy and scale autonomous AI agents for high-impact business processes

What This Enables?

Rapidly translate business problems into **AI-driven agent workflows**

Build **multi-agent systems** for decisioning, automation, and monitoring

Accelerate validation through **production-ready PoCs**

Industrialize successful use cases into **scalable enterprise solutions**

Why Our Approach Works?

Domain-led AI (Risk, Operations, FCC, Compliance)

Pre-built agent frameworks (faster deployment)

Lab-to-production approach (not just PoCs)

Built-in **governance & auditability**

Scalable architecture designed for regulated environments

600+

professionals across Data, Analytics & AI in India

50+

Agentic AI, Gen AI and Transformation solutions developed across risk, compliance & operations

100+

transformation programs delivered across BFSI

3x

faster deployment timelines

AI-Powered Plug-in Utilities for Transformation

01

ChatGenie – Answers from your data

A smart chat assistant that uses your company's documents and data to answer questions and guide users in plain English

02

VisionGuard – See risks in real time

Monitors camera feeds to spot unusual activity, access issues, and policy breaches, and sends instant alerts

03

OnboardOne – onboarding end to end

Captures data, checks documents, verifies identity, and completes approvals in one simple flow

04

QueryFree – Just ask in English

Turn plain-English questions into database queries and get accurate answers without knowing/ writing SQL

05

VoiceMate – Answer.Assist.Automat

Handles inbound and outbound calls—support, reminders, and verification—using natural voice conversations

Potential Use-cases

- Policy/ procedures Clarification
- Process Guidance
- Compliance Validation
- Onboarding Support
- Training Assistance
- Context-Aware Follow-ups

- Suspicious Activity Detection
- Unauthorized Access Monitoring
- Crowd Density Monitoring
- Employee Misconduct Detection
- Asset Movement Tracking

- Digital Data Capture
- Document Collection & Verification
- KYC & Identity Validation
- Risk Profiling & Scoring
- Sanctions & Watchlist Screening
- Adverse media news screening

- Natural Language to SQL Conversion
- Ad-hoc Data Retrieval
- Business-Friendly Querying
- Context-Aware Data Responses
- Multi-Table Data Extraction

- Inbound Customer Support Automation
- Outbound Sales & Follow-up Calls
- Fraud Alert Triage & Verification Calls
- Collections & Payment Reminder Calls
- KYC / Onboarding Assistance Calls

Value Delivered

Instant answers that reduce administrative time spent

Real-time visibility and risk alerts

Faster, cleaner onboarding journeys

Business teams can access complex data without knowing query language

Automates large volumes of voice calls

AI-Powered Plug-in Utilities for Transformation

06

MatchMaster – Match. Find breaks. Fix it.

Auto-matches transactions across systems, flags differences, and helps close exceptions faster

07

ImageGuard – Clean, correct, genuine

Checks image quality, authenticity, validates IDs, detects duplicates or tampering, and extracts key fields.

08

ControlRadar – Controls on live watch

Continuously checks key controls, raises alerts on failures, and keeps an audit trail

09

SpendGuard – Stop wrong claims early

Reads receipts, spots duplicates and policy breaches, and prevents incorrect expense payouts

10

AuditHub – Plan. Execute. Report

Runs the full audit cycle—planning, fieldwork, reporting, and issue tracking—in one place

Potential Use-cases

- Automated Transaction Matching
- Multi-Source Data Reconciliation (Bank, GL, PSP)
- Exception Identification & Flagging
- Break Classification & Root Cause Analysis

- Document Image Quality Check (Blur, Glare, Cropping)
- ID Proof Validation (PAN, Aadhaar, Passport)
- Face Match & Liveness Detection
- Duplicate Image Detection
- Data Extraction (OCR) & Field Validation

- Automated Control Testing
- Real-Time Alerts
- KRI Monitoring
- Control Breach Detection
- Rule-Based Monitoring
- Issue Tracking Workflow
- Audit Logs & Reporting
- System Integrations

- Receipt Validation (OCR-Based)
- Duplicate Claim Detection
- Expense Categorization
- Limit & Threshold Validation
- Exception Flagging
- Fraud & Anomaly Detection

- Risk Assessment & Audit Planning
- Audit Scheduling & Resource Allocation
- Audit Reporting & Dashboards
- Issue Logging & Tracking
- Follow-up & Closure Monitoring

Value Delivered

Reconciliations completed in minutes

Reliable image checks and fraud control

Real time and ad-hoc control assurance

Identify leakage in expenses

Standardized, efficient audit cycles

AI-Powered Plug-in Utilities for Transformation

11 LiquiX – Know your deposit drift

Analyzes deposit patterns to show stability, run-offs, and unusual movements for better liquidity decisions

12 ClaimSure – Pay right, everytime

Checks claims against policy rules and documents, highlights exceptions, and flags high-risk cases

13 TrueKYC – KYC done right

Reviews Video KYC recordings for script adherence, identity match, liveness, and process compliance

14 MerchantFlow - KYM

Scans websites and onboarding data to confirm business activity, validate MCC, and score risk

15 Sentilytics – Hear the market mood

Tracks news and social posts to surface sentiment trends, issues, and early reputation risks

Potential Use-cases

LiquiX
- Stable vs Volatile Deposits
- Run-off Rate Estimation (Behavioral Analysis)
- Stress Scenario Simulation
- Segment-wise Stability
- Abnormal Withdrawal Pattern Detection
- Concentration Risk in Depositor Base

ClaimSure
- Policy Coverage Validation
- Sum Assured & Payout Accuracy Check
- Exception & Deviation Flagging
- Rule-Based & AI-Driven Decisioning
- High-Risk Claim Identification

TrueKYC
- Script adherence
- Face Match & Liveness Review
- Customer Presence & Interaction Validation
- Document Verification from Video Feed
- Exception Flagging for Manual Review

MerchantFlow
- Website Scraping & Business Activity Identification
- MCC Validation & Correction
- Merchant Risk Scoring & Classification
- Chargeback & Transaction Risk Signals

Sentilytics
- Social Media Sentiment Tracking
- News & Media Monitoring
- Brand Reputation Scoring
- Negative Sentiment Alerts
- Keyword & Hashtag Monitoring
- Trend & Virality Analysis

Value Delivered

- Clear view of deposit/ liquidity stability
- Accurate, rule-aligned claim decisions
- Consistent, compliant KYC review
- Accurate merchant assessment validation & scoring
- Early signals from public sentiment

About our Financial Services practice

Dedicated team of
~1500 professionals
across Banking, NBFCs, Insurance & Capital Market

>250 cumulative year
Of lending & finance services expertise

Experience across the FS value chain
Origination | Disbursement | Servicing | Collections | Reporting | Underwriting | Investments

~ 100,000 hrs
delivery hours across lending, mortgage, payment & risk programs

>150
transformation programs across FS institutions

> 50
engagement with Tier 1 Banks & NBFCs

All **12** of India's top
12 Banks
(BANKNIFTY)

One partner for strategy, transformation, risk, technology and assurance across Financial Services

Our Financial Services Capabilities

Our Financial Services capability combines strategy, technology, risk, and execution to deliver regulator-ready, scalable, and value-driven transformation.

INDUSTRY EXPERTISE & EXPERIENCE

- Insurance
- Banking
- Payments
- NBFC / HFCs
- Asset & Wealth Management
- Mortgage & Consumer Lending
- Capital Markets

Key Skillsets delivered to our Marquee clients

Internal Audit & Finance Advisory	Risk & Compliance	Data, AI Intelligence Platform	Digital & Core Technology Platforms	Enterprise Architecture & Platforms	Business & Finance Value Transformation	Transformation Assurance & Governance	Managed Services & GCC Enablement
SOP & Policy Development	Regulatory Reporting & Compliance	Enterprise Data Platform & Architecture	IT Strategy, Architecture & Roadmap	Core Banking & Lending Platforms	Finance Transformation & CFO Advisory	Independent Program Assurance	FS Managed Services
Quality Assurance Review	Model Risk Management	Risk, Finance & Regulatory Data Platforms	Cloud Strategy, Migration & Optimization	Digital Banking & Channel Transformation	Enterprise Performance Management	SI/ OEM Governance & Oversight	Tech-Enabled Operations Support
Control Testing	Risk Analytics	Advanced Analytics & Machine Learning	Enterprise Platforms (SAP, Oracle, Microsoft)	Enterprise Architecture & Target State Design	Cost Optimization & Revenue Enhancement	Program / Portfolio Management (PMO / DTO)	GCC Strategy, Setup & Scale
Issue Validation	Regulatory Remediation	BI & Data Visualization	Security Architecture, IAM & Privacy	Payments & Transaction Platforms	Operating Model Redesign	Release, Cutover & Go-Live Management	Build-Operate-Transfer (BOT) Models

End-to-End Transformation Enablers

- Strategy – Design – Build - Run
- Vendor & Ecosystem Orchestration
- Regulatory & Supervisor Engagement
- Change, Adoption & Capability Building
- Value Tracking & KPI Governance
- Data Lineage, Quality & Controls
- Continuous Optimization & Manage Run
